Becky -

Attached are SESD's final laboratory results for the PFC analyses of surface water samples collected by Georgia EPD from 6/19/16 to 6/24/16 as part of the North Georgia Surface Water PFC Study. Many of the samples exceeded EPA's drinking water combined health advisory for PFOA and PFOS of 70 ng/L. The highest PFOS concentration was 2,300 ng/L. Please distribute the laboratory results to all impacted parties as appropriate.

Thanks, Mike Neill
